Figures

- | | | |
|-----|---|-----|
| 1.1 | Houseboats in Banjarmasin (southeast Borneo) carry trade goods up and down the rivers from the coast to the interior. | 14 |
| 1.2 | Hoklo (Hok-ló 福佬) are coastal fishing and trading groups along the coast of southeast China. | 15 |
| 1.3 | The Royal Palace of Gowa (South Sulawesi). | 19 |
| 2.1 | J-shaped fish hooks from A) Lene Hara Cave Timor and B) Tron Bon Lei B shelter Alor. The shaft in the Tron Bon Lei B hook has been extrapolated as shown by the dotted line. | 31 |
| 2.2 | Examples of marine shell beads recovered from Timor-Leste. | 32 |
| 2.3 | Example of the ethnographic items decorated with Nassarius shell beads from Timor-Leste and Papua New Guinea. | 34 |
| 2.4 | Stratigraphic section drawing from Tron Bon Lei Square B showing distribution of radiocarbon dates down the profile and position of fish hooks associated with burial in Layer 11. | 38 |
| 2.5 | Concentric rotating hooks from Tron Bon Lei B Layer 11, Alor. | 39 |
| 2.6 | Examples of marine shell beads recovered from Tron Bon Lei B shelter, Alor. | 40 |
| 2.7 | Total number of stone artefacts, obsidian artefacts and bone fragments by layer at Tron Bon Lei B (left). Distribution of obsidian artefacts from Tron Bon Lei B by stratigraphic layer shown as a percentage of all obsidian artefacts analysed by pXRF (right). | 42 |
| 4.1 | Some of the goods characterising the 'Late Prehistoric South China Sea style'. | 109 |
| 4.2 | Local and exogenous ceramics found on sites of the Isthmus of Kra. | 112 |
| 4.3 | Bracelet fragments (left), lapidary glass beads (right) from Khao Sek and Khao Sam Kaeo, early period. | 118 |

4.4	Local Sa Huynh-Kalanay related types of ceramics found in the Kra Isthmus in the Thai-Malay Peninsula.	121
4.5	Glass material from Ban Na Hyan.	124
6.1	The Samalic languages.	160
6.2	Orang Laut settlement in Riau.	161
6.3	Schematic model of trade mosaic in the trans-Isthmian region.	171
7.1	Geographic distribution of Bajaw communities in Island Southeast Asia (dark grey) and the Kendari population in south-western Sulawesi (star).	179
7.2	Phylogenetic analysis with fineSTRUCTURE showing that the Kendari Bajaw (Sulawesi) cluster with populations from Sumba (eastern Indonesia), the Philippines and North Borneo.	186
7.3a	Multidimensional scaling (MDS) plot showing F_{ST} values between Indonesian and Malagasy populations based on mtDNA haplogroup frequencies. Western Indonesian populations are shown by triangles; eastern Indonesian populations are shown by circles.	187
7.3b	Multidimensional scaling (MDS) plot showing F_{ST} values between Indonesian and Malagasy populations based on Y-chromosome haplogroup frequencies. Western Indonesian populations are shown by triangles; eastern Indonesian populations are shown by circles.	188
7.4	TreeMix analysis on autosomal genome-wide SNP data showing migration nodes from Papua New Guinea Highlander and South Asian groups to the Kendari Bajaw population, with migration weights of 13% and 9%, respectively.	191
7.5	Shared Identity-By-Descent (IBD) fragments between pairs of individuals in Southeast Asia, using nine filtering thresholds representing old connections (20 cM) to recent connections (80 cM).	192
8.1	Schematic evolution of boat types in the South China Seas.	201
8.2	High-keel boats of the Yami on Lanyu Island.	201
8.3	Toraja funerary monument, Waseput.	203
8.4	Sailing raft, Borobudur.	205
8.5	Coastal craft, Borobudur.	205
8.6	Large trading ship, Borobudur.	206
8.7	Siamese ship in Japanese scroll.	206
8.8	Star chart, Marshall Islands.	207

8.9	Astro-navigation chart of the South China Sea.	209
8.10	The Selden map of China and Southeast Asia, ca. 1620.	210
10.1	First photographed encounter between the Moken and British government officers in colonial Burma.	238
10.2	For the Moken, harpooning turtles symbolises harpooning women, an act of cultural anthropophagy, as well as their refusal of literacy, as script is believed to have been written on the shells of turtles, the consumption of which deprived them of this opportunity.	241
10.3	A Moken flotilla of more than 40 boats, representing about 40 nuclear families, hiding from the military underneath foliage.	242
10.4	Ritually consumed turtles are offered to the ancestors by sacred men. This symbolic act of social anthropophagy (as turtles represent women) enables the Moken to retain their collective memory of and refocus on their relationship with the world and the myths that determine the specificities of their social space.	243
10.5	Despite all the threats that could potentially lead to the disappearance of nomads and their traditions, the Moken are resilient and still know how to build the <i>kabang</i> , a marvel of naval technology, and know where to flee if oppression were to become unbearable.	247
10.6	The Moken keep traces of past and external influences, illustrated here by an authentic version of the <i>Manora</i> (a well-known theatrical performance in Thailand) performed around a shamanic trance intended to invoke the spirits of the earth and to call upon the divinities to ‘repair’ what has been destroyed (here, the land devastated by tin mines).	248
10.7	Moken extracting tin from the river in Ko Ra (southern Thailand).	251
11.1	View of Chaw Lay Sea Gypsies of Phuket, southern Thailand; tying up a boat in the bay.	256
11.2	Cultural mapping of the Chaw Lay living within the Phuket area.	258
11.3	Detailed mapping of the elements of a maritime adapted settlement, including the contents and location of discard middens.	259

- 11.4 View of ‘dermabrasion’ of the area underneath a stilted house at Phap Pha—a base camp abandoned more than 100 years ago—to examine fine vertical and horizontal detail. 260
- 11.5 The landscape which the Chaw Lay inhabit is characterised by long stretches of sandy beach broken by estuarine areas of mangrove and mud-flat, rocky outcrops and off-shore island groups. 263
- 11.6 Access to and harvesting of shellfish is the essential feature of the traditional economic adaptation of all Chaw Lay communities. As a result, bulky and highly visible shell debris is the main archaeological marker of their use of a site. 265
- 11.7 Tools used by the Chaw Lay are characteristically few in number and easily movable, as they suit a lifestyle where numerous possessions would be a burden. Items are multi-purpose, light and easy to transport, made of wood, coconut, bamboo, stone and other materials easily available from the local environment. 267
- 11.8 Among the few functional specialists in a Chaw Lay community are those self-identified individuals who have knowledge of spirit matters and can lead ritual activities. They function at ceremonies such as Loy Rua, the biannual gathering with the ancestors immediately before and after annual dispersal at the end of the monsoon season. 268
- 11.9 Diagram illustrating the Adaptive Cycle which models the interaction and function of traits of resilience. 270
- 11.10 View of a base camp evolved to supply central points and rainy season gathering nodes, reflecting the conservation phase (k) of the Adaptive Cycle. 272
- 11.11 Extending the construction of houses into the intertidal by building on stilts in an attempt to increase carrying capacity at a base camp under stress. 273
- 11.12 A woman processing fish at Sapam on a village-wide secondary deposition of subsistence refuse. 275
- 11.13 View of Rawai illustrating the blanketing layer of occupation filling up what were formerly open, clean communal spaces. 275
- 11.14 Rawai base camp – a constricted settlement under severe stress, where over recent decades site space has become so spatially packed that there is no option for expansion, resulting in the blurring or loss of the characteristic Chaw Lay sense of differentiation of space and functional grouping. 279

13.1	Sama-Bajau in all Austronesian languages.	303
13.2	Tree diagram of Sama-Bajau languages.	304
14.1	An aerial view of Sapeken Island taken by satellite image.	308

Maps

1.1	Approximate distribution of sea nomad groups in Southeast Asia.	13
2.1	Location map showing Lesser Sunda Islands (lower map) and location of archaeological sites discussed in the text (upper map).	30
3.1	Southeast Asian sites with anatomically modern human habitation by 30,000 BP.	52
3.2	Southeast Asian sites with 17,000–15,000 BP human habitation, with and without ground-stone tools.	64
3.3	Southeast Asian sites with 30,000–28,000 BP human habitation, with and without rock art.	65
3.4	Southeast Asian sites with 14,000–11,000 BP human habitation, with and without bone tools.	67
3.5	Southeast Asian sites with 10,000–7500 BP human habitation, with and without bone points.	68
3.6	Southeast Asian sites with 12,000–10,000 BP human habitation, with and without shell fish hooks.	69
3.7	Southeast Asian sites with 12,000–10,000 BP human habitation, with and without shell ornaments.	70
3.8	Southeast Asian sites with 7000–5000 BP human habitation, with and without marine shell ornaments.	71
3.9	Southeast Asian sites with 9000–7000 BP human habitation, with and without marine shell adzes.	72
3.10	Southeast Asian sites with 9000–6000 BP human habitation, with and without marine shell scrapers.	73
3.11	Southeast Asian sites with 11,000–10,000 BP flexed and fractional burials.	74
3.12	Mortuary disposals in sites with 4000–3000 BP human habitation in Southeast Asia.	75
3.13	Southeast Asian sites with 11,000–9000 BP human habitation, with and without obsidian.	77
3.14	Southeast Asian sites with 8000–7000 BP human habitation, with and without translocated fauna.	78
3.15	Southeast Asian sites with 5000–4000 BP human habitation, with and without translocated fauna.	79

3.16	Lithics characterisation of sites with 6000–5000 BP human habitation in Southeast Asia.	82
3.17	Pottery characterisation of sites with 4500–3500 BP human habitation in Southeast Asia.	83
4.1	Sites surveyed and/or excavated by the French-Thai Archaeological Mission.	108
4.2	Maps showing the location of sites and types of industries analysed for each site.	113
5.1	Orang Suku Laut Map.	144
6.1	The Vezo hypothesis.	168
10.1	Distribution of the main Austronesian sea nomad groups of the Malay Peninsula.	240
11.1	The main base camps discussed showing their locations in the network, evolving towards entrophy through a series of seasonal fluctuations in size and population density.	277
12.1	The area of Suai on the southwest coast of East Timor with localisation of names cited in the chapter.	283
13.1	Overview of locations of Bajau groups over their dispersal area.	306
13.2	Wuring, a Bajau village near Maumere in Flores.	308
14.1	Southeast Asian Maritime World and the two Focused Regions.	324
14.2	Selected sites of intensive and extensive fieldworks the author conducted from 1994 to 2015.	326
14.3	Distribution of the Bajau population in 2000. Population by province in the Philippines, by <i>daerah</i> (district) in Malaysia, and by <i>kabupaten</i> (regency) in Indonesia.	329
14.4	Distribution of the Bajau [Source: I made this map referring to Grimes ed. (2000) and my fieldwork on “the digital base maps”].	330
14.5	Distribution and cluster of the Bajau in Indonesia, 2000.	334
14.6	Sapeken and the maritime networks of the Bajau.	348

Tables

3.1	Numerical identification of sources used for the distribution maps.	55
3.2	Sources by distribution map.	57
3.3	Summary of Liang Bua Sector IV identifications (number of individual specimens) relevant to this contribution, from Van den Burgh et al. (2009: Fig. 2, Appendix A). Note: Deepest porcupine, civet and macaque remains all occur in spit 16 or spit 17.	63

3.4	Southeast Asia osseous artefacts 16,000 BP and older.	66
3.5	Fourth millennium BP ISEA dates for domesticates also found in Lapita sites.	80
3.6	Summary of proposed Pleistocene maritime exchange networks (approximate chronological order).	85
3.7	Summary of proposed Holocene maritime exchange networks (approximate chronological order).	86
3.8	Correspondences between mtDNA haplogroup dispersals and archaeologically attested maritime interaction axes.	86
4.1	Sites and analysed material by the authors in the Isthmus of Kra.	114
6.1	Linguistic affiliation of sea nomad populations.	158
6.2	Sailfish in Moken/Moklen.	164
6.3	Big-eye scad in Moken/Moklen.	164
6.4	Lake/ocean in Moklen.	164
6.5	Gill net in Moken/Moklen.	165
6.6	Hearth on boat in Moken/Moklen.	165
6.7	Fishtrap in Moken/Moklen.	165
6.8	Bracelet in Moken/Moklen.	165
6.9	Vezo fish names and their corresponding Malayopolynesian etymologies.	166
7.1	Frequency of Bajaw haplogroups for (left) mtDNA and (right) the Y chromosome.	184
7.2	Admixture sources showing the percentage of admixture for each population of interest with dates in generations and years before present (YBP). Bootstrap 95% confidence intervals are given in parentheses.	194
14.1	Population change in Kangean and Sapeken (1896–2000).	350

Acknowledgements

The editors would like to acknowledge the referees who took time to comment on each chapter on what were sometimes complex issues as well as the two anonymous referees who reviewed the complete manuscript. Their comments and suggestions were greatly valued.

The editors also wish to thank the following departments for supporting the publication of this book: the CNRS department Prétech (UMR7055, Nanterre) and the IRD/Muséum National d'Histoire Naturelle UMR PALOC (UMR208).
